

QUALITY POLICY

Ceramiche Mariner is continuous innovation!

Facing a constantly evolving panorama, Ceramiche Mariner pursues with commitment and dedication the goal of **Quality** through the tireless improvement of its **technologies** and the **training** of its team.

Our primary goal is to improve again and again; in compliance with the high **quality of the Product and Service** that we offer, maintaining high standards of **Safety at Work** and a policy of **Sustainability** and **Respect** for everything that surrounds us.

Our work is lead daily by ambitious goals but supported by the certainty that only thanks to the commitment of the whole team of collaborators and business partners, these can be achieved.

Giving life and concreteness to the increasingly named **Sustainability**, Ceramiche Mariner produces **optimizing** every process to the maximum, using the latest generation technologies that allow a high **saving of natural and energy resources**.

Solar panels, cogeneration turbine and a timely reintegration into the production cycle of all processing waste, are just one example of the actions that the company implements in respect of the environment.

Ceramiche Mariner, starting from the holding to every single member of its team, lives and works within its territory of origin, which it loves and respects.

Precisely the awareness that a better environment, in the broadest sense of the term, improves the quality of life of everyone, pushes the company management to promote numerous initiatives aimed at the cohesion of the entire group of actors in business processes and the entire surrounding supply chain.

The ethics and respect for people, the passion for what you do, allow this special company to feel properly like a **big family**.
